

See how their tumor responds— **before you treat**

elive™ Test delivers functional insights into immunotherapy response from live tumor biopsies—measuring real-time cytokine activity in intact tumor tissue exposed to checkpoint inhibitors, using a standard core needle biopsy.

How it works

- 1 A licensed physician **orders** elive Test and sends patient for biopsy.
- 2 Elephas Laboratories **coordinates** with biopsy facility.
- 3 Elephas Laboratories **measures** immune response using proprietary platform.
- 4 Treating physician **receives** results with pathologist interpretation.

Patient Profile

Adult (18+) recurrent/metastatic patients with solid tumors who are eligible for immunotherapy

Billing

- ✓ **Medicare, Commercial insurance or Self-Pay**
- ✓ List Price: **\$3,500**
Out-of-Pocket: **\$1,500**
